(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Cardinal (U.S. 2,849,468).

Cardinal discloses the preparation of zinc salts of glutamic acid in the following example (see col. 4 ,lines 60-71):

About 14.7 grams of glutamic acid were added to about 2 liters of water, and the resulting suspension was heated to dissolve the glutamic acid. About 20.4 grams of zinc chloride (0.15 mole) were added to the glutamic acid-containing solution, and sufficient sodium hydroxide was admixed with the resulting solution to produce a pH of about 7.3. The precipitated zinc salt was separated by filtration and was washed. About 97.0% of the glutamic acid was precipitated in the form of the zinc glutamate salt. An analysis of the product was approximately as follows:

5.1% nitrogen (theory 5.4%)
36.8% zinc (theory 37.8%)

This is identical with the claim.
